The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 2 and 15 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The recited "homogeneous micro" in line 1 of claim 2 lacks an antecedent basis and thus is indefinite. Improper Markush language is recited in claim 15 and an addition of "the group consisting of" after "from" in line 2 is suggested.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3 and 15 are rejected under 35 U.S.C. 103(a) as obvious over Narayanan (US 6,303,131) in view of Carter et al (US 2,835,654).

Rejection is maintained for reason of record with following response.

First, the recitation of "consisting essentially of" alone cannot overcome the rejection based on the art reciting "comprising". See *In re De Lajarte*, 337 F2d 870, 143 USPQ 256 (CCPA, 1964); When applicant contends that modifying components in the reference composition are excluded by the recitation of "consisting essentially of", applicant has the burden of showing the basic and novel characteristics of his

Art Unit: 1714

composition – i.e. a showing that the introduction of these components would materially change characteristics of applicant's invention. Applicant failed to show that the presence N-octyl pyrrolidone is detrimental to the invention.

Second, Narayanan (US'131) teaches that microemulsion is a dispersion having a particle size of 10 to 100 millimicrons (0.01 to 0.1 micron) at col. 2, lines 15-21 meeting the instant dispersion contrary to applicant's assertion.

Contrary to applicant's assertion, the instant lignin sulfate is one of the well known anionic emulsifiers as taught by Carter et al (col. 12, line 43), and thus the use of such in Narayanan is a *prima facie* obviousness since Narayanan teaches employing an anionic emulsifier.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
